

## Who we are?

Agileware Inc. <https://agileware.jp/> is the developer of a SaaS project management solution for developers.

Founded in 2012, based on Osaka, Japan. 30 team members.

CEO and Founder (Mr. M. Kawabata) will go to US to seek for potential partners and customers.

Our speed, quality and flexible, agile development process are highly evaluated in Japan and we believe same will be true in the US.

## What are our strength?

We develop and manage our own project management software, named “Lychee Redmine”. It offers easy-to use Gantt chart, Agile Kanban, time and resource management.

It was released 5 years ago and is used by more than 500 companies now including Japanese Giant companies such as Panasonic, Mitsubishi Heavy Industries, Tokyo Marine Nichido Systems, Nissin Food, etc. The number of our clients doubled in the past three years. 46% of our clients are manufactures, 27% IT and 5% service industry. According to our clients, their project management efficiency improved dramatically and led to a decrease in overtime work.

We use an “agile development process” while reflecting customer needs and market situation, so it’s flexible and speedy. Our engineers’ high skill make it possible. In fact, we are one of the Ruby program development leaders in Japan. We even do examinations for Rails technology qualification. CEO, Kawabata is leading Ruby business association as a board member. Of course, we can do contract development on a custom basis.

## How would meeting us benefit you?

We are seeking possible partners and clients in the US. For example, if you offer CRM software, your clients would be happy if they could check project development status by Lychee Redmine, while checking customers’ appointment stage with your CRM.

Another example is that you can increase your shares by working with us, as we are part of worldwide Redmine users and have strong influence with them.

Let's build business together!

Annotations on the screenshot:

- UNDO/REDO possible
- Freely add display items
- Display milestone
- Create new issue
- Drag to change the schedule
- Set the period by dragging
- Change the order
- The trackers are identified by color and the achievements and malfunctions can be found at a glance
- The time left and the actual time spent working are visualized through numbers
- Advance the workflow by dragging
